I want Swift Current to start aiming towards becoming a self sufficient, sustainable, competent, healthy community. We need to take the health of our watershed seriously and minimize the amount of pollution from our city. I want a strong waste reduction/diversion plan and a reduction of pavement in our city which will also keep it cooler in the summer. Let's decide what this community needs and refuse junk products entering our borders, and re-establish a reuse warehouse. I want rations on energy use, a ban on cosmetic pesticide and lawn fertilizer use. We need to start taking the rampant waste and pollution problem in this world seriously; That requires serious positive change, not superficial measures. I want the establishment of food forests and a seed bank to contribute to food security in this city as well as a localized instead of globalized economy.
